DECAY FACTOR CHART

Remaining Activity

AGE OF DEVICE	1 month old	2 months old	3 months old	4 months old	5 months old	6 months old	7 months old	8 months old	9 months old	10 months old	11 months old	12 months old	13 months old	14 months old	15 months old	16 months old	17 months old	18 months old

To determine the current activity of a device, in MBq (megabecquerel), multiply the original activity of the device, in mCi (millicurie), as found on the device label, by the appropriate decay factor for the age of the device, as found in the chart above.

EXAMPLE: A P-2021 that is 4 months old would have a current activity of:

10 mCi – original activity, from device label

20.3 – decay factor, from chart above

$$10 \text{ mCi} \times 20.3 = 203 \text{ MBq}$$
